**Savitribai Phule Pune University**  
**Honours\* in Cyber Security**  
**Third Year of Engineering (Semester V)**  
**310401: Information and Cyber Security**

|                                  |                |  |
|----------------------------------|----------------|--|
| <b>Teaching Scheme:</b>          | <b>Credit:</b> | <b>Examination Scheme:</b>                                       |
| <b>Theory: 04<br/>Hours/Week</b> | 04             | <b>Mid_Semester(TH): 30 Marks<br/>End_Semester(TH): 70 Marks</b> |

**Companion Course, if any:** - Information and Cyber Security Laboratory

**Course Objectives:**

- To understand the basics of computer, network and information security.
- To study operating system security and malwares.
- To acquaint with security issues in internet protocols.
- To analyze the system for vulnerabilities.

**Course Outcomes:**

**On completion of the course, learner will be able to–**

- Use cryptographic techniques in secure application development.
- Apply methods for authentication, access control, intrusion detection and prevention.
- To apply the scientific method for security assessment
- To develop computer forensics awareness.

**Course Contents**

| <b>Unit I</b>  | <b>Security Fundamentals</b>                        | <b>(06 Hours)</b> |
|--|---|-------------------|
| An Overview of Information Security: The Basic Components, Threats, Policy and Mechanism, Assumptions and Trust, Assurance, Operational Issues, Human Issues, Security nomenclature.<br>Access Control Matrix, Security Policies: Confidentiality, Integrity, Availability Policies and Hybrid Policies, OS Security   |   |                   |
| <b>Unit II</b>   | <b>Modular Arithmetic and Cryptography Basics</b>   | <b>(08 Hours)</b> |
| Modular Arithmetic : Modular Arithmetic Notations, Modular Arithmetic Operations, Euclid's method of finding GCD, The extended Euclid's algorithm.<br>Cryptography : Classical encryption techniques, Block and Chain ciphers, Data Encryption Standard, Advanced Encryption Standard, RC5   |   |                   |
| <b>Unit III</b>  | <b>Advanced Cryptography</b>                        | <b>(08 Hours)</b> |
| Chinese Remainder Theorem and its implication in Cryptography, Diffie-Hellman key exchange algorithm, RSA algorithm, Elgamal Arithmetic, Elliptic Curve Cryptography, Message Digest and Cryptographic Hash Functions, MD5 and SHA-1, Digital Signatures and Authentication.   |   |                   |
| <b>Unit IV</b>   | <b>Issues in Security Management and Cyber Laws</b> | <b>(08 Hours)</b> |
| Overview, Risk identification, Risk Assessment, Risk Control Strategies, Quantitative vs. Qualitative Risk Control Practices. Risk Management. Laws and Ethics in Information Security, Codes of Ethics, Protecting programs and data<br>Cybercrime and Information security, Classification of Cybercrimes, The legal perspectives- Indian perspective, Global perspective, Categories of Cybercrime, Types of Attacks, a Social Engineering, Cyber stalking, Cloud Computing and Cybercrime. |   |                   |
| <b>Unit V</b>  | <b>Key Management and Secure Communication</b>      | <b>(08 Hours)</b> |
| Public Key Infrastructure(PKI), X.509 Certificate, Needham Schroeder algorithm and Kerberos. IP Security: IPv6 and IPSec, Web Security: SSL, HTTPS, Mail Security: PGP, S/MIME . Firewall : Different Types and Functionalities  |   |                   |
| <b>Unit VI</b>   | <b>Attacks, Malicious Logic and Countermeasures</b> | <b>(08 Hours)</b> |

Phishing, Password Cracking, Key-loggers and Spywares, Types of Virus, Worms, DoS and DDoS, SQL injection, Buffer Overflow, Spyware, Adware and Ransomware. Antivirus and other security measures  
Intrusion Detection System : IDS fundamentals, Different types of IDS. Intrusion Prevention.

**Savitribai Phule Pune University**  
**Honours\* in Cyber Security**  
**Third Year of Engineering (Semester V)**  
**310402: Information and Cyber Security Laboratory**

| Teaching Scheme             | Credit Scheme | Examination Scheme and Marks |
|-----------------------------|---------------|------------------------------|
| Practical: 02<br>Hours/Week | 01            | Term work: 50 Marks          |

**Guidelines for Laboratory Conduction**

- **Lab Assignments:** Following is list of suggested laboratory assignments for reference. Laboratory Instructors may design suitable set of assignments for respective course at their level. **Beyond curriculum assignments and mini-project may be included as a part of laboratory work.** The instructor may set multiple sets of assignments and distribute among batches of students. It is appreciated if the assignments are based on real world problems/applications. The Inclusion of few optional assignments that are intricate and/or beyond the scope of curriculum will surely be the value addition for the students and it will satisfy the intellectuals within the group of the learners and will add to the perspective of the learners. For each laboratory assignment, it is essential for students to draw/write/generate flowchart, algorithm, test cases, mathematical model, Test data set and comparative/complexity analysis (as applicable). Batch size for practical and tutorial may be as per guidelines of authority.
- **Term Work**–Term work is continuous assessment that evaluates a student's progress throughout the semester. Term work assessment criteria specify the standards that must be met and the evidence that will be gathered to demonstrate the achievement of course outcomes. Categorical assessment criteria for the term work should establish unambiguous standards of achievement for each course outcome. They should describe what the learner is expected to perform in the laboratories or on the fields to show that the course outcomes have been achieved. **It is recommended to conduct internal monthly practical examination as part of continuous assessment.**
- **Assessment:** Students' work will be evaluated typically based on the criteria like attentiveness, proficiency in execution of the task, regularity, punctuality, use of referencing, accuracy of language, use of supporting evidence in drawing conclusions, quality of critical thinking and similar performance measuring criteria.
- **Laboratory Journal-** Program codes with sample output of all performed assignments are to be submitted as softcopy. Use of DVD or similar media containing students programs maintained by Laboratory In-charge is highly encouraged. For reference one or two journals may be maintained with program prints in the Laboratory. As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers as part of write-ups and program listing to journal may be avoided. Submission of journal/ term work in the form of softcopy is desirable and appreciated.

**Suggested list of assignments**  
**(Use suitable programming language/Tool for implementation)**

| Sr. No | Statement of Assignment   |
|--------|---|
| 1      | Implement Euclid's algorithm to find the GCD of two integers. Further implement extended Euclidean algorithm to find the multiplicative inverse of the given integer. |
| 2      | Develop the program to implement DES algorithm for encryption and decryption. Assume suitable key.  |
| 3      | Develop the program to implement RSA algorithm for encryption and decryption. Assume suitable Private and Public Keys.  |
| 4      | Write a program to implement SHA1 algorithm using libraries (API)   |
| 5      | Configure and demonstrate use of vulnerability assessment tool like Wireshark or SNORT  |

**Savitribai Phule Pune University**  
**Honours\* in Cyber Security**  
**Third Year of Engineering (Semester VI)**  
**310403- Enterprise Architecture and Components**

| Teaching Scheme:         | Credit    | Examination Scheme:  |
|--------------------------|-----------|--|
| <b>TH: 04 Hours/Week</b> | <b>04</b> | <b>Mid_Semester(TH): 30 Marks</b><br><b>End_Semester(TH): 70 Marks</b> |

**Course Objectives:**

- To learn fitting of enterprise information into the broader context of enterprise architecture frameworks
- To learn an architectural foundation that effectively addresses important business and societal challenges.
- To learn a comprehensive architectural guide that includes architectural principles, architectural patterns, and building blocks and their applications for information-centric solutions.
- To provide methodology that is critical for all business leaders and technologist trying to build an enterprise on the internet.

**Course Outcomes:**

On completion of the course, learner will be able to–

- CO1: Explain the concept of the enterprise information architecture.
- CO2: Describe how the domains can be managed within the enterprise through a coherent Information Governance framework.
- CO3: Interpret component model of the EIA Reference Architecture for relevant services with its descriptions and interfaces.
- CO4: Discuss the operational characteristics of the EIA Reference Architecture.
- CO5: Describe the increasing role of enterprise-wide Metadata Management within information-centric use case scenarios.
- CO6: Define enterprise security architecture based on available risk to an enterprise. Discuss various models for enterprise security architecture.

**Course Contents**

| <b>Unit I</b>   | <b>Introduction</b>   | <b>(08 Hours)</b> |
|---|---|-------------------|
| External Forces: A New World of Volume, Variety, and , Internal Information Environment Challenges<br>The Need for a New Enterprise Information, The Business Vision for the Information-Enabled , Building an Enterprise Information Strategy and the Information , Best Practices in Driving Enterprise Information Planning , Relationship to Other Key Industry and IBM , The Roles of Business Strategy and Technology, Terminology and Definitions, Methods and Models, Enterprise Information Architecture Reference Architecture in Context |   |                   |
| <b>Unit II</b>  | <b>Domains and Enterprise information architecture</b>      | <b>(08 Hours)</b> |
| Data domains, Conceptual architecture overview, EIA reference architecture, architecture principals for EIA, Logical view of EIA reference architecture   |   |                   |
| <b>Unit III</b>   | <b>Enterprise information architecture: Component model</b> | <b>(08 Hours)</b> |

The component model, component relationship diagram, component description, component interaction diagrams- a deployment scenario

|                |   |                   |
|----------------|---|-------------------|
| <b>Unit IV</b> | <b>Enterprise information architecture: Operational model</b> | <b>(08 Hours)</b> |
|----------------|---|-------------------|

Terminology and definitions, Context of operational model design techniques, service qualities, Standards used for operational model relationship diagram framework of operational patterns

|               |  |                   |
|---------------|--|-------------------|
| <b>Unit V</b> | <b>Metadata and master data management</b> | <b>(08 Hours)</b> |
|---------------|--|-------------------|

Terminology and definitions, business scenarios, component deep dive, component interaction diagram-deployment scenario, service qualities for metadata management, master data management: Terminology, business scenarios, component deep dive, component interaction diagram, service qualities.

|                |   |                   |
|----------------|---|-------------------|
| <b>Unit VI</b> | <b>Enterprise Security Architecture—A Top-down Approach</b> | <b>(08 Hours)</b> |
|----------------|---|-------------------|

SABSA, COBIT and TOGAF and Their Relationships, Using the Frameworks to Develop an Enterprise Security Architecture, A Real-Life Example, Using CMMI to Monitor, Measure and Report the Architecture Development Progress

**Savitribai Phule Pune University**  
**Honours\* in Cyber Security**  
**Fourth Year of Engineering (Semester VII)**  
**410401 -Internet of Things and Embedded Security**

| Teaching Scheme:     | Credit | Examination Scheme:  |
|----------------------|--------|--|
| TH: 04<br>Hours/Week | 04     | Mid_Semester(TH): 30<br>Marks<br>End_Semester(TH): 70<br>Marks |

**Prerequisite Courses, if any:**

- Fundamentals of Embedded Systems, IoT
- Basic of Network Security

**Companion Course, if any:**

**Course Objectives:**

- To understand the main threats and attacks in IoT Environment
- Ability to understand the Security requirements in IoT.
- To learn security aspects in the design of IoT systems
- To learn IoT security life cycle
- To create awareness of IoT security
- To understand cryptographic security for their IoT implementations and deployments
- To learn identity and access management for IoT development
- To understand Identity models for IoT

**Course Outcomes:**

On completion of the course, learner will be able to–

- CO1-Define IoT security issues and concerns
- CO2-Identify the main threats and attacks in IoT Environment
- CO3- Determine secure development methodology for the IoT
- CO4- Describe IoT security lifecycle management processes
- CO5 – Apply cryptography methods in securing the IoT and embedded system
- CO6- Determine IoT IAM infrastructure

**Course Contents**

|               |  |                   |
|---------------|--|-------------------|
| <b>Unit I</b> | <b>Introduction: Securing the Internet of Things, Vulnerabilities, attacks and countermeasures</b> | <b>(08 Hours)</b> |
|---------------|--|-------------------|

Defining the IoT, IoT uses today, The IoT in the enterprise, The IoT of the future and the need to secure, Primer on threats - The classic pillars of information assurance, Threats, Vulnerability, Risks, vulnerability, and risks; Primer on attacks and countermeasures- Common IoT attack types, Attack trees, Fault (failure) trees and CPS; Today's IoT attacks – attacks; Threat modeling an IoT system

|                |   |                   |
|----------------|---|-------------------|
| <b>Unit II</b> | <b>Security Engineering for IoT Development</b> | <b>(08 Hours)</b> |
|----------------|---|-------------------|

Building security in to design and development, Secure design - Security in agile developments , Focusing on the IoT device in operation, Safety and security design - Threat modeling , Privacy impact assessment , Safety impact assessment, Compliance, Security system integration, Processes and agreements, Technology selection – security products and services- IoT device hardware, Selecting an MCU, Selecting a real-time operating system (RTOS) , IoT relationship platforms, Cryptographic security APIs , Authentication/authorization

|   |  |                   |
|---|--|-------------------|
| <b>Unit III</b>   | <b>The IoT Security Lifecycle</b>                              | <b>(08 Hours)</b> |
| <p>The secure IoT system implementation lifecycle, Implementation and integration - IoT security CONOPS document, Network and security integration, System security verification and validation (V&amp;V), Security training, Secure configurations, Operations and maintenance - Managing identities, roles, and attributes, Security monitoring, Penetration testing, Compliance monitoring, Asset and configuration management, Incident management, Forensics, Dispose - Secure device disposal and zeroization, Data purging, Inventory control, Data archiving and records management</p>   |  |                   |
| <b>Unit IV</b>  | <b>Cryptographic Fundamentals for IoT Security Engineering</b> | <b>(08 Hours)</b> |
| <p>Cryptography and its role in securing the IoT, Types and uses of cryptographic primitives in the IoT, Encryption and decryption- Symmetric encryption , Asymmetric encryption, Hashes, Digital signatures- Symmetric (MACs), Random number generation, Ciphersuites, Cryptographic module principles, Cryptographic key management fundamentals - Key generation- Key establishment, Key derivation, Key storage, Key escrow, Key lifetime, Key zeroization, Accounting and management, Examining cryptographic controls for IoT protocols- Cryptographic controls built into IoT communication protocols(ZigBee, Bluetooth, Near field communication (NFC)), Cryptographic controls built into IoT messaging protocols – MQTT,CoAP,DDS, REST, Future directions of the IoT and cryptography</p>   |  |                   |
| <b>Unit V</b>   | <b>Identity and Access Management Solutions for the IoT</b>    | <b>(08 Hours)</b> |
| <p>An introduction to identity and access management for the IoT- The identity lifecycle, Establish naming conventions and uniqueness requirements, Secure bootstrap, Credential and attribute provisioning, Account monitoring and control, Account updates, Account suspension, Account/credential deactivation/deletion, Authentication credentials- Passwords, Symmetric keys, Certificates X.509, IEEE 1609.2, Biometrics, New work in authorization for the IoT, IoT IAM infrastructure - 802.1x, PKI for the IoT, Authorization and access control</p>   |  |                   |
| <b>Unit VI</b>  | <b>Identity management models</b>                              | <b>(08 Hours)</b> |
| <p>Introduction – Identity management, identity Portrayal, Different Identity management models – local identity, network identity, federated identity, global web identity, Identity management in internet of things – user-centric identity management, hybrid identity management</p>   |  |                   |
| <b>Learning Resources</b>   |  |                   |
| <b>Text Books:</b>  |  |                   |
| <p>4. Practical Internet of Things Security, Brian Russell, Drew Van Duren, PACKT Publishing</p> <p>5. Parikshit N. Mahalle, Poonam N. Raikar, “Identity management for internet of things”, River publications</p>   |  |                   |
| <b>Reference Books:</b>   |  |                   |

**Savitribai Phule Pune University**  
**Honours\* in Cyber Security**  
**Fourth Year of Engineering (Semester VII)**  
**410402: Risk Assessment Laboratory**

|                          |               |                            |
|--------------------------|---------------|----------------------------|
| <b>Teaching Scheme:</b>  | <b>Credit</b> | <b>Examination Scheme:</b> |
| <b>TH: 02 Hours/Week</b> | <b>01</b>     | <b>Term work Marks 50</b>  |

**Prerequisite Courses, if any:**

- Embedded Systems and Internet of Things Security

**Companion Course, if any:**

**Course Objectives:**

- To understand the importance of protecting IoT devices and sensors
- To safeguard the information IoT devices collect.
- To assess the risks associated with IoT device vulnerabilities.
- To learn IoT device is functioning properly safe from attacks.

**Course Outcomes:**

On completion of the course, student will be able to–

CO1- Understand the vulnerabilities associated with IoT devices and sensors

CO2- Apply the knowledge to secure the data, communication with respect to embedded and IoT device.

CO3- Identify the risks associated in the context of application that uses IoT.

**Guidelines for Instructor's Manual**

The instructor's manual is to be developed as a hands-on resource and reference. The instructor's

manual need to include prologue (about University/program/ institute/ department/foreword/preface), curriculum of course, conduction and Assessment guidelines, topics under consideration- concept, objectives, outcomes.

**Guidelines for Student's Laboratory Journal**

The laboratory assignments are to be submitted by student in the form of journal. Journal consists

of prologue, Certificate, table of contents, and handwritten write-up of each assignment (Title,

Objectives, Problem Statement, Outcomes, software and Hardware requirements, Date of Completion, Assessment grade/marks and assessor's sign.

*As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers as part of write-ups and program listing to journal may be avoided.*

### Guidelines for Laboratory Conduction

The instructor may set multiple sets of assignments and distribute among batches of students. It is

appreciated if the assignments are based on real world problems/applications. Student should perform at least three experiments from group A, four experiments from group B and, two experiments from C and any one assignment from group D.

### Suggested List of Laboratory Experiments/Assignments

| Sr. No.        | Group A  |
|----------------|--|
| 1              | Study of Raspberry-Pi, Beagle ( History & Elevation) board, Arduino and other micro controller   |
| 2              | Study of different operating systems for Raspberry-Pi /Beagle board. Understanding the process of OS installation on Raspberry-Pi /Beagle board  |
| 3              | Study of different sensors:- temperature sensor, bio-sensor, IR sensor, chemical sensor(PH), gauge sensor, ultrasonic sensor etc.  |
| 4              | Understand the connection and configuration of GPIO and its use in programming. Write an application of the use of LEDs.   |
| <b>Group B</b> |  |
| 5              | Design and implement program to detect and report invalid login attempts and malicious activities to embedded device.  |
| 6              | Design and implement the program to secure the communication between the IoT devices.  |
| 7              | Design and implement the program to protect the data stored at IoT device.   |
| 8              | Design and implement the program for detecting tampering of data at storage at IoT   |
| 9              | Write a program identifying operating system, version and IP address assigned to the device.   |
| 10             | Design and implement the code to authenticate the communication with IoT device.   |
| <b>Group C</b> |  |
| 11             | Install and use open source tools to Identifying various types of attacks on IoT device. Analyze the risks associated with the attacks. Write a C++/Java/Python program to identify at least one such attack.  |
| 12             | Design and implement program/ use open source tool to analyze the packets in IoT environment.  |
| 13             | Develop a Real time application like a smart home security.<br><b>Description:</b> When anyone comes at door the camera module automatically captures his image and send a notification to the owner of the house on his mobile phone using GSM modem. |

**Group D**

|           |  |
|-----------|--|
| <b>14</b> | <p>Design Real time application like smart home with following requirements: When user enters into house the required appliances like fan, light should be switched ON. Appliances should also get controlled remotely by a suitable web interface. The objective of this application is student should design complete Smart application in group and analyze the risks associated with it.</p> <p>Perform following five steps to risk assessment</p> <ol style="list-style-type: none"><li>a. Identify hazards, i.e. anything that may cause harm.</li><li>b. Decide what it may be harmed, and how?</li><li>c. Assess the risks and take action.</li><li>d. Make a record of the findings.</li><li>e. Review the risk assessment</li></ol> |
| <b>15</b> | <p>Design Real time application like a smart home with following requirements: If anyone comes at door the camera module automatically captures his image send it to the email account of user or send notification to the user. Door will open only after user's approval. The objective of this application is student should design smart home application in group and analyze the risks associated with it.</p> <ol style="list-style-type: none"><li>a. Identify the various types of risk like Technical IoT risk, Security and privacy IoT risk, Ethical IoT risk</li><li>b. Identify Vulnerabilities of IoT devices</li><li>c. Identify threats and do the threat analysis.</li></ol>   |

**Fourth Year of Engineering (Semester VIII)**  
**410403: Information System Management**

| Teaching Scheme  | Credit Scheme                                    | Examination Scheme and Marks   |
|--|--|--|
| Lecture: <b>04</b><br>Hours/Week   | <b>04</b>  | Mid_Semester (TH): <b>30 Marks</b><br>End_Semester (TH): <b>70 Marks</b> |
| Prerequisites: Basic knowledge of Operating System and Data bases  |  |  |
| Companion Course : ---   |  |  |
| <b>Course Objectives:</b> <ol style="list-style-type: none"> <li>1. The course is blend of Management and Technical field.</li> <li>2. Discuss the roles played by information technology in today's business and define various technology architectures on which information systems are built.</li> <li>3. Define and analyze typical functional information systems and identify how they meet. the needs of the firm to deliver efficiency and competitive advantage.</li> <li>4. Identify the basic steps in systems development.</li> </ol>   |  |  |
| <b>Course Outcomes:</b><br>On completion of the course, learner will be able to– <ol style="list-style-type: none"> <li>1. Understand the concepts of Information systems and design the strategies for dealing with competitive forces.</li> <li>2. Apply Ethical and Social Issues to Information Systems.</li> <li>3. Design and analyse of IT Infrastructure. Understand the concepts of Operating System Platforms, Enterprise Software Applications, Data Management and Storage</li> <li>4. Identify and evaluate the knowledge. Apply it to the Decision-Making Process.</li> <li>5. Outline the range of solutions for Systems Development and Organizational Change.</li> <li>6. Demonstrate the use of The Information Security Triad: Confidentiality, Integrity, Availability (CIA) Confidentiality, Manage the Tools for Information Security</li> </ol> |  |  |
| <b>Course Contents</b>   |  |  |
| Unit I   | Information Systems, Organizations, and Strategy | (06 Hours)   |
| Organizations and Information Systems, What Is an Organization? , Features of Organizations, How Information Systems Impact Organizations and Business Firms, Economic Impacts, Organizational and Behavioural Impacts, The Internet and Organizations, Implications for the Design and Understanding of Information Systems, Using Information Systems to Achieve Competitive Advantage, Porter's Competitive Forces Model, Information System Strategies for Dealing with Competitive Forces, The Internet's Impact on Competitive Advantage   |  |  |
| <a href="#">#Exemplar/Case Studies</a>   | ERP  |  |
| Unit II  | Ethical and Social Issues in Information Systems | (09 Hours)   |
| Understanding Ethical and Social Issues Related to Systems, A Model for Thinking About Ethical, Social, and Political Issues, Five Moral Dimensions of the Information Age, Key Technology Trends That Raise Ethical Issues, Ethics in an Information Society, Basic Concepts: Responsibility, Accountability, and Liability, Ethical Analysis, Candidate Ethical Principles, Professional Codes of Conduct, Some Real-World Ethical Dilemmas, The Moral Dimensions of Information Systems, Information Rights, Privacy and Freedom in the Internet Age, Property Rights: Intellectual Property  |  |  |
| <a href="#">#Exemplar/Case Studies</a>   | Kiuwan Code Security (SAST), Nmap, Netsparker    |  |
| Unit III   | IT Infrastructure and                            | (09 Hours)   |

|   |  |            |
|---|--|------------|
|   | Emerging Technologies                              |            |
| IT Infrastructure, Defining IT Infrastructure, Evolution of IT Infrastructure, Technology Drivers of Infrastructure Evolution, Infrastructure Components, Computer Hardware Platforms, Operating System Platforms, Enterprise Software Applications, Data Management and Storage, Networking/Telecommunications Platforms, Internet Platforms, Consulting and System Integration Services, Contemporary Hardware Platform Trends, The Mobile Digital Platform, Consumerization of IT and BYOD, Grid Computing, Virtualization   |  |            |
| <a href="#">#Exemplar/Case Studies</a>  | Windows, Android, iOS, MacOS                       |            |
| Unit IV   | Managing Knowledge and Enhancing Decision Making   | (08 Hours) |
| The Knowledge Management Landscape, Important Dimensions of Knowledge, The Knowledge Management Value Chain, Types of Knowledge Management Systems, Enterprise-Wide Knowledge Management Systems, Enterprise Content Management Systems, Knowledge Network Systems, Collaboration And Social Tools and Learning Management Systems, Knowledge Work Systems, Knowledge Workers and Knowledge Work, Requirements of Knowledge Work Systems, Examples of Knowledge Work Systems, Decision Making and Information Systems, Business Value of Improved Decision Making, Types of Decisions, The Decision-Making Process, Managers and Decision Making in the Real World, High-Velocity Automated Decision Making, Business Intelligence in the Enterprise, What Is Business Intelligence?, The Business Intelligence Environment |  |            |
| <a href="#">#Exemplar/Case Studies</a>  | AsinSeed, AVDecision, Expert Choice                |            |
| Unit V  | Building and Managing Systems                      | (08 Hours) |
| Systems as Planned Organizational Change, Systems Development and Organizational Change, Business Process Redesign, Overview of Systems Development, The Importance of Project Management, Runaway Projects and System Failure, Project Management Objectives, Selecting Projects, Management Structure for Information Systems Projects, Linking Systems Projects to the Business Plan, Information Requirements and Key Performance Indicators, Portfolio Analysis, Scoring Models, Establishing the Business Value of Information Systems, Information System Costs and Benefits, Real Options Pricing Models, Limitations of Financial Models, Managing Project Risk, Dimensions of Project Risk, Change Management and the Concept of Implementation, Controlling Risk Factors   |  |            |
| <a href="#">#Exemplar/Case Studies</a>  | ASANA, Basecamp, JIRA, Teamwork PM, Microsoft Team |            |
| Unit VI   | Information Systems Security                       | (08 Hours) |
| The Information Security Triad: Confidentiality, Integrity, Availability (CIA) Confidentiality, Tools for Information Security, Password Security, Blockchain & Bitcoin Blockchain, Backups, Physical Security, Security Policies, Mobile Security, Personal Information Security   |  |            |
| <a href="#">#Exemplar/Case Studies</a>  | Norton, Life Lock, Zone Alarm.                     |            |
| <b>Learning Resources</b>   |  |            |
| <b>Text Books:</b>  |  |            |
| 1. Management Information Systems: Managing the Digital Firm, 13th Edition, Kenneth C. Laudon, New York University, Jane P. Laudon, New York University, 2014, Pearson  |  |            |

James L. Smith Shouhong Wang, Joseph Mortati

**MOOC/ Video Lectures available at:**Prof. Kunal Ghosh, Prof. Surojit Mookherjee, Prof. Saini Das, IIT Kharagpur, Management Information System, <https://nptel.ac.in/courses/110/105/110105148/>

**Savitribai Phule Pune University**  
**Honours\* in Cyber Security**  
**Fourth Year of Engineering (Semester VIII)**  
**410404: Seminar**

| Teaching Scheme                           | Credit Scheme | Examination Scheme and Marks  |
|---|---------------|-------------------------------|
| <b>Practical: 02</b><br><b>Hours/Week</b> | <b>02</b>     | <b>Presentation: 50 Marks</b> |

**Course Objectives:**

- To train the student to independently search, identify and study important topics in computer science.
- To develop skills among students to study and keep themselves up to date of the technological developments taking place in computer science
- To expose students to the world of research, technology and innovation.

**Course Outcomes:**

On completion of the course, student will be able to

- To train the student to independently search, identify and study important topics in computer science.
- To develop skills among students to study and keep themselves up to date of the technological developments taking place in computer science.
- To expose students to the world of research, technology and innovation

**Guidelines for Seminar:**

- The department will assign an internal guide under which students shall carry out Hons. seminar work
- In order to select a topic for Hons. Seminar, the student shall refer to various resources like books, magazines, scientific papers, journals, the Internet and experts from industries and research institutes
- The topic selected for Hons. Seminar by the students will be scrutinized and if found suitable, shall be approved by the internal guide
- Student should also explore the tools and technologies available for implementation of selected topic. Student should implement/ simulate the seminar work partially/ fully for enhancing the practical skill set on topic.
- Student shall submit the progress of his/her Hons. Seminar work to the internal guide.
- The student shall prepare a REPORT on the work done on Hons. Seminar and submit it at the time of presentation.

**Evaluation of IT Seminar Work**

- During the seminar work, its progress will be monitored, by the internal guide.
- At the end of seminar work, copy of Hons. Seminar Report should be prepared and submitted to department.
- End Examination shall be based on the Report, technical content and Presentation.
- **Guidelines for Assessment:** Panel of staff members along with a guide would be assessing the seminar work based on these parameters-Topic, Contents and Presentation, implementation, regularity, Punctuality and Timely Completion, Question and Answers, Report, Paper presentation/Publication, Attendance and Active Participation.
